

Prepaid Homeowner Soil Test Kits

Help promote responsible fertilizer use based on soil testing for home gardens and grounds. These soil test kits include directions, forms, sample bags, and prepaid mailers to make soil testing quick and easy. The homeowner will receive updated fertilizer recommendations from the University of New Hampshire, specific for their own garden/lawn and soil. Organic fertilizer recommendations will be sent to those submitting the organic test form; the standard test results in recommendations based on non-organic fertilizer sources.
